DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-3,8,12,14,16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Mauborgne et al. (1606476).

Regarding Claims 1,3,8,12,14,16 and 17, Mauborgne et al. show in Figures 4 & 10, an antenna structure comprised of a monofilar helix antenna, resonance wave coil "A", and a substantially parallel and concentric metallic rings "B" and "D", positioned around the longitudinal axis of the helix antenna, wherein the rings are parasitically coupled (i.e., electrostatically or electromagnetically) to the helix, all arranged as claimed. Regarding Claim 2, Mauborgne et al. teach on page 3, lines 106-119, a multifilar helix construction.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 4-7,9-11,13,15 rejected under 35 U.S.C. 103(a) as being unpatentable over Mauborgne et al. (1606476) in view of Filipovic et al. (6184844).

Application/Control Number: 10/709,511

Art Unit: 2828

Regarding Claims 4-7,9-11,13 and 15, Mouborgne et al. do not show the helical antenna etched on a flexible substrate and with rings etched on another substrate/radome and also as open, overlapping loops. Thus, Filipovic et al. are cited as resolving the level of ordinary skill and as evidence of obviousness in the antenna art, and shows in Figures 13 and 14, for example, a flexible substrate/radome 406 with etched quadrifilar antenna 1304 or 1308 and rings 214 of conductive material, overlapping, and having open ends before rolling the substrate (Figures 23A-C), where a second substrate 406 is employed to support the top ring 412 atop the first antenna 1308. It would have been obvious to the skilled artisan to employ the techniques of Filipovic et al. in order to form the helical antenna in Mouborgne et al. for the purpose of providing a mass-produced, etched antenna, easily made for portable radios.

Response to Arguments

5. Applicant's arguments with respect to claims of record have been considered but are most in view of the new ground(s) of rejection.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Application/Control Number: 10/709,511

Art Unit: 2828

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wimer whose telephone number is (571) 272-1833. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Minsun O. Harvey can be reached on (571) 272-1835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
